

Name Key Date _____

Vertical Angles

Vertical angles can be thought of as opposite angles. Their sides form two pairs of opposite rays. Vertical angles are the nonadjacent angles formed when two lines intersect.

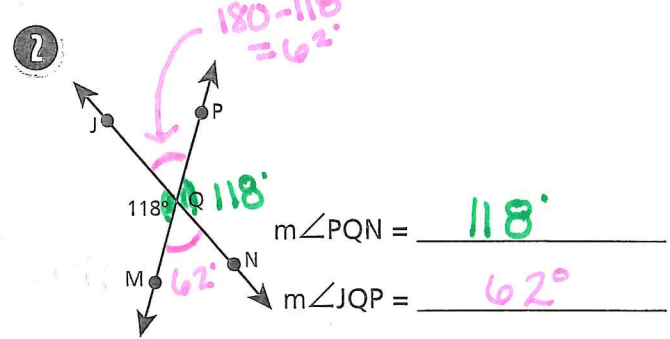

Line AB and line CD intersect.
 Angle 1 and angle 3 are vertical angles.
 Angle 2 and angle 4 are vertical angles.
Vertical angles are congruent. The angle measure for each vertical angle pair will be the same.
 Adjacent angles are supplementary.
 $\angle 1 + \angle 2 = 180^\circ$
 $\angle 3 + \angle 4 = 180^\circ$

Use vertical angles to determine the missing measures. Name the vertical angle pairs.

$m\angle XAY = 142^\circ$
 $m\angle XAT = 38^\circ$

Vertical Pairs: Vertical angles are \cong
 $\angle XAT$ and $\angle ZAY$
 $\angle XAZ$ and $\angle ZAT$

$m\angle PQN = 118^\circ$
 $m\angle JQP = 62^\circ$

Vertical pairs: vertical \angle s are \cong
 $\angle JQP$ and $\angle NQM$
 $\angle JQM$ and $\angle NQP$

$m\angle JKL = 108^\circ$
 $m\angle UKJ = 72^\circ$

Vertical pairs: Vertical \angle s are \cong
 $\angle JKL$ and $\angle MKU$
 $\angle UKJ$ and $\angle LKM$

$m\angle RSF = 90^\circ$
 $m\angle FSM = 90^\circ$

Vertical pairs: Vertical \angle s are \cong
 $\angle RSF$ and $\angle USM$
 $\angle FSM$ and $\angle RSU$

Find Missing Angle Measurements

Use your understanding of complementary, supplementary, and linear angles to find the missing measures.

$\angle 10$ and $\angle 11$ are complementary angles.

$$\angle 10 + \angle 11 = 90^\circ$$

- 1 If $m\angle 10 = 32^\circ$, then $m\angle 11 = \underline{58^\circ}$ $\begin{matrix} 32 + \angle 11 = 90 \\ -32 \\ \hline + \angle 11 = 90 \end{matrix}$
- 2 If $m\angle 10 = 63^\circ$, then $m\angle 11 = \underline{27^\circ}$ $63 + \angle 11 = 90$
- 3 If $m\angle 10 = 11^\circ$, then $m\angle 11 = \underline{79^\circ}$ $11 + \angle 11 = 90$

$\angle 14$ and $\angle 15$ are supplementary angles.

$$\angle 14 + \angle 15 = 180$$

- 4 If $m\angle 14 = 68^\circ$, then $m\angle 15 = \underline{112^\circ}$ $68 + \angle 15 = 180$
- 5 If $m\angle 14 = 111^\circ$, then $m\angle 15 = \underline{69^\circ}$ $111 + \angle 15 = 180$
- 6 If $m\angle 14 = 87^\circ$, then $m\angle 15 = \underline{93^\circ}$ $\begin{matrix} 87 + \angle 15 = 180 \\ \angle M + \angle P = 180 \end{matrix}$

$\angle M$ and $\angle P$ are linear angles.

Linear Pairs are supplementary!!

- 7 If $m\angle M = 67^\circ$, then $m\angle P = \underline{113^\circ}$ $67 + \angle P = 180$
- 8 If $m\angle M = 132^\circ$, then $m\angle P = \underline{48^\circ}$ $132 + \angle P = 180$
- 9 If $m\angle M = 44^\circ$, then $m\angle P = \underline{136^\circ}$ $44 + \angle P = 180$

$\angle 5$ and $\angle 6$ are complementary angles. $\angle 6$ and $\angle 7$ are supplementary angles. All are nonadjacent.

$$\angle 5 + \angle 6 = 90^\circ$$

$$\angle 6 + \angle 7 = 180^\circ$$

- 10 If $m\angle 5 = 34^\circ$, then $m\angle 6 = \underline{56^\circ}$, and $m\angle 7 = \underline{93^\circ}$
- 11 If $m\angle 6 = 50^\circ$, then $m\angle 5 = \underline{40^\circ}$, and $m\angle 7 = \underline{140^\circ}$
- 12 If $m\angle 7 = 132^\circ$, then $m\angle 6 = \underline{48^\circ}$, and $m\angle 5 = \underline{42^\circ}$
