ACC Geometry Booklet for Notes \#1
Introduction to Trig Graphs (Chapter 14)
(Basics)

Name:
$\qquad$

Objective: To construct the parent graphs of trigonometric functions for sine, cosine, and tangent using exact values.

Recall: A function whose graph repeats a basic pattern is said to be periodic.

Complete the following table for $\sin \theta$.

| $\begin{array}{\|c\|} \hline \theta \\ \text { (degree) } \\ \mathbf{x} \\ \hline \end{array}$ | $0^{\text {o }}$ | $30^{\circ}$ | $45^{\circ}$ | $60^{\circ}$ | $90^{\circ}$ | $120{ }^{\circ}$ | 135 ${ }^{\circ}$ | $150{ }^{\circ}$ | $180^{\circ}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \theta \\ \text { (radian) } \\ \mathbf{x} \end{gathered}$ |  |  |  |  |  |  |  |  |  |
| $\begin{gathered} \sin \theta \\ \text { (exact) } \\ y \end{gathered}$ |  |  |  |  |  |  |  |  |  |
| $\begin{gathered} \sin \theta \\ \text { (nearest } \\ \text { tenth), } y \end{gathered}$ |  |  |  |  |  |  |  |  |  |

## (13.6) Period- Length that is takes before the graph repeats.

To graph the function $y=\sin \theta$, use values of $\theta$ expressed in either degrees or radians. These values represent the $x$ values on a graph. Use the values of $\sin \theta$ expressed as a value rounded to the nearest tenth to represent the $y$ values on the graph.

Ordered pairs for points on these graphs are of the form $(\theta, \sin \theta)$.
On the next page, plot the points, $(\theta, \sin \theta)$. Connect the points with a smooth curve. This graph represents the graph of the sine function.

$$
y=\sin \theta
$$

Complete the following table for $\cos \theta$.

| $\begin{gathered} \theta \\ \hline \text { (degree) } \\ \mathbf{x} \end{gathered}$ | $0^{\text {o }}$ | $30^{\circ}$ | $45^{\circ}$ | $60^{\circ}$ | $90^{\circ}$ | $120{ }^{\circ}$ | $135{ }^{\circ}$ | $150{ }^{\circ}$ | $180{ }^{\circ}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \theta \\ \text { (radian) } \\ \mathrm{x} \end{gathered}$ |  |  |  |  |  |  |  |  |  |
| $\begin{gathered} \cos \theta \\ \text { (exact) } \\ y \end{gathered}$ |  |  |  |  |  |  |  |  |  |
| $\begin{gathered} \cos \theta \\ \text { (nearest } \\ \text { tenth), } y \end{gathered}$ |  |  |  |  |  |  |  |  |  |

| $\begin{array}{\|c} \theta \\ \text { (degree) } \\ \mathbf{x} \end{array}$ | 210 ${ }^{\circ}$ | 225 ${ }^{\circ}$ | $240{ }^{\circ}$ | 270 ${ }^{\circ}$ | $300{ }^{\circ}$ | 315 ${ }^{\circ}$ | $330{ }^{\circ}$ | $360{ }^{\circ}$ | $390{ }^{\circ}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \theta \\ \text { (radian) } \\ \mathbf{x} \end{gathered}$ |  |  |  |  |  |  |  |  |  |
| $\begin{gathered} \cos \theta \\ \text { (exact) } \\ y \\ \hline \end{gathered}$ |  |  |  |  |  |  |  |  |  |
| $\begin{gathered} \cos \theta \\ \text { (nearest } \\ \text { tenth), } y \end{gathered}$ |  |  |  |  |  |  |  |  |  |

To graph the function $y=\cos \theta$, use values of $\theta$ expressed in either degrees or radians. These values represent the $x$ values on a graph. Use the values of $\cos \theta$ expressed as a value rounded to the nearest tenth to represent the $y$ values on the graph.

Ordered pairs for points on these graphs are of the form $(\theta, \cos \theta)$.
On the next page plot the points, $(\theta, \cos \theta)$. Connect the points with a smooth curve. This graph represents the graph of the cosine function.

$$
y=\cos \theta
$$

Complete the following table for $\tan \theta$. Remember: $\tan \theta=\frac{\sin \theta}{\cos \theta}$

| $\begin{array}{\|c\|} \hline \theta \\ \text { (degree) } \\ \mathbf{x} \\ \hline \end{array}$ | $0^{\text {o }}$ | $30^{\circ}$ | $45^{\circ}$ | $60^{\circ}$ | $90^{\circ}$ | $120{ }^{\circ}$ | 135 ${ }^{\circ}$ | $150{ }^{\circ}$ | $180{ }^{\circ}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \theta \\ \text { (radian) } \\ \mathbf{x} \end{gathered}$ |  |  |  |  |  |  |  |  |  |
| $\boldsymbol{\operatorname { t a n }} \theta$ (exact) |  |  |  |  |  |  |  |  |  |
| $\begin{gathered} \tan \theta \\ \text { (nearest } \\ \text { tenth), } y \end{gathered}$ |  |  |  |  |  |  |  |  |  |

| $\boldsymbol{\theta}$ <br> (degree) <br> $\mathbf{x}$ | $210^{\circ}$ | $225^{\circ}$ | $240^{\circ}$ | $270^{\circ}$ | $300^{\circ}$ | $315^{\circ}$ | $330^{\circ}$ | $360^{\circ}$ | $390^{\circ}$ |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\boldsymbol{\theta}$ <br> (radian) <br> $\mathbf{x}$ |  |  |  |  |  |  |  |  |  |
| $\tan \boldsymbol{\theta}$ <br> (exact) <br> $\mathbf{y}$ |  |  |  |  |  |  |  |  |  |
| $\tan \boldsymbol{\theta}$ <br> (nearest <br> tenth), $\mathbf{~}$ |  |  |  |  |  |  |  |  |  |

To graph the function $y=\tan \theta$, use values of $\theta$ expressed in either degrees or radians. These values represent the $x$ values on a graph. Use the values of $\tan \theta$ expressed as a value rounded to the nearest tenth to represent the $y$ values on the graph.

Ordered pairs for points on these graphs are of the form $(\theta, \tan \theta)$.
On the back plot the points, $(\theta, \tan \theta)$. Connect the points with a smooth curve. This graph represents the graph of the tangent function.

$$
y=\tan \theta
$$

$$
\tan \theta
$$

Name: $\qquad$ Date: $\qquad$ Hour: $\qquad$
Changing Amplitude \& Period
Sine \& Cosine Functions
For every $\qquad$ degrees or $\qquad$ radians, the sine and cosine functions repeat their values. We say the sine and cosine functions are periodic, each having a period of $\qquad$ degrees or $\qquad$ radians.

To change the period of a sine and cosine function a value must be placed before theta, $\underline{b}$.
For example, $y=\sin 2 \theta$. This function would have a period of $\frac{360 / 2 \pi}{b}=\frac{360 / 2 \pi}{2}=180^{\circ}$ or $\pi$
The amplitude is the midpoint from the highest point to the lowest point of the function. The graphs we constructed had an amplitude of 1 .

To change the amplitude of a sine or cosine function the coefficient, $a$, must be changed.
For example, $y=2 \sin \theta$. This function would have an amplitude of 2 . In other words, the maximum it would reach is 2 and the minimum it would reach is $\mathbf{- 2}$.

## Tangent Functions

For every $\qquad$ degrees or $\qquad$ radians, the tangent functions repeat their values. We say the tangent functions are periodic, each having a period of $\qquad$ degrees or $\qquad$ radians.

To change the
period of tangent function a value must be placed before theta, $\underline{b}$.

For example, $y=\tan 2 \theta$. This function would have a period of $\frac{180 / \pi}{b}=\frac{180 / \pi}{2}=90^{\circ}$ or $\frac{\pi}{2}$
Because the tangent is infinite in both directions, the tangent function has no amplitude.

## Look at Nspire demonstration of this!

This same information is presented on the graphs of the sine and cosine functions below, where the horizontal axis shows the values of $\theta$ and the vertical axis shows the values of $\sin \theta$ or $\cos \theta$.

## Key Concept : Periodic Functions

For every $\qquad$ degrees or $\qquad$ radians, the sine and cosine functions repeat their values. We say the sine and cosine functions are periodic, each having a period of $\qquad$ degrees or $\qquad$ radians.

Remember:
Both sine and cosine have a maximum value of $\qquad$ and a minimum value of $\qquad$

## Key Concept: Amplitude

The amplitude of the graph of a periodic function is the absolute vale of half the difference between its maximum value and its minimum value.

You try: Using the above information and your definition of amplitude, set up and expression as to how to time the amplitude of the graphs of the sine and cosine functions.

## 13.6/14.1Homework

## Part 1 What We Discovered

Formal Key Concepts: Amplitude and Period
Words For functions of the form $y=a \sin b \theta$ and $y=a \cos b \theta$, the amplitude is $|a|$, and the period is $\frac{360^{\circ}}{|b|}$ or $\frac{2 \pi}{|b|}$.
For functions of the form $y=a \tan b$, the amplitude is not defined, and the period is $\frac{180^{\circ}}{|b|}$ or $\frac{\pi}{|b|}$.
Examples $y=3 \sin 4 \theta \quad$ amplitude 3 and period $\frac{360^{\circ}}{4}$ or $90^{\circ}$
$y=-6 \cos 5 \theta \quad$ amplitude $|-6|$ or 6 and period $\frac{2 \pi}{5}$
$y=2 \tan \frac{1}{3} \theta \quad$ no amplitude and period $3 \pi$

1. What is the unit circle? How is a unit circle related to the graphed sine and cosine functions?
\#2-9Tell whether each statement describes a characteristic of the sine function, cosine function, both functions or neither functions.
2. The function has a period of $360^{\circ}$
3. The y -intercept is 1 .
4. The range of the function is

$$
-1 \leq y \leq 1
$$

7. The horizontal intercepts occur only at multiples of $90^{\circ}$
8. The function has an amplitude of 2 .
9. The $y$-intercept is 0 .
10. The function increases in the interval

$$
0^{\circ} \leq \theta \leq 90^{\circ}
$$

8. The function decreases in the interval

$$
0^{\circ} \leq \theta \leq 90^{\circ}
$$

10. Determine the period of each function.
a.

b.

c.

d.

Find the amplitude, if it exists, and the period for each function. Then graph each function.
11. $y=4 \sin (2 \theta)$
