

# Answer Key

## Isosceles and Equilateral Triangles Practice (Day 2)

1. Answer: True or False.

- a)  $\triangle ABC$  is a right triangle TRUE
- b)  $\triangle BED$  is an obtuse triangle TRUE
- c)  $\triangle BED$  is equilateral False
- d)  $\triangle EDC$  is a right triangle TRUE
- e)  $\angle ABC$  is 90 degrees TRUE

2. Answer: True or False.

- a)  $\triangle ABE$  is a right triangle True
- b)  $\triangle BED$  is an obtuse triangle TRUE
- c)  $\triangle BED$  is isosceles TRUE
- d)  $\triangle EBC$  is a right triangle TRUE
- e)  $\angle DBC$  is 90 degrees False
- f)  $\triangle BDC$  is equilateral TRUE
- g)  $\angle D$  is the vertex angle of  $\triangle EDB$  TRUE
- h)  $\angle C$  is 60 degrees TRUE

Use the Triangle Sum Theorem to find the numbered angles listed below each figure.

$\angle 1 = 28^\circ$

$m\angle 1 = 120^\circ$

$m\angle 1 = 30^\circ$   
 $m\angle 2 = 60^\circ$

$m\angle 1 = 56^\circ$   
 $m\angle 2 = 56^\circ$   
 $m\angle 3 = 74^\circ$

$m\angle 1 = 30^\circ$

$\angle 2 = 60^\circ$

$m\angle 1 = 8^\circ$

$m\angle 1 = 140^\circ$   
 $m\angle 3 = 65^\circ$   
 $m\angle 5 = 115^\circ$

$m\angle 2 = 40^\circ$   
 $m\angle 4 = 75^\circ$

8. Find the measure of each side of equilateral triangle RST with  $RS = 2x + 2$ ,  $ST = 3x$  and  $TR = 5x - 4$ .

$$ST = RS$$

$$3x = 2x + 2$$

$$-2x \quad -2x$$

$$\boxed{x = 2}$$

$$\boxed{RS = 6}$$

$$\boxed{ST = 6}$$

$$\boxed{TR = 6}$$

9. Find the measure of each side of isosceles triangle ABC with vertex angle  $\angle B$ , if  $AB = 4y$ ,  $BC = 3y + 2$ , and  $AC = 3y$ .

$$AB = BC$$

$$4y = 3y + 2$$

$$\boxed{y = 2}$$

$$\boxed{AB = 8}$$

$$\boxed{BC = 8}$$

$$\boxed{AC = 6}$$

10. Find the measure of each side of  $\triangle ABC$  with vertices  $A(-1, 5)$ ,  $B(6, 1)$ , and  $C(2, -6)$ .  
Classify the triangle.

$$7^2 + 4^2 = AB^2$$

$$49 + 16 = AB^2$$

$$\boxed{\sqrt{65} = AB}$$

$$7^2 + 4^2 = BC^2$$

$$\boxed{\sqrt{65} = BC}$$

$$11^2 + 3^2 = AC^2$$

$$121 + 9 = AC^2$$

$$\boxed{\sqrt{130} = AC}$$

$AB = BC \therefore$   
 $\triangle ABC$  is an  
 isosceles  $\triangle$  because  
 of the 2  $\cong$  sides
