

Rotations

A rotation is a turn about a point. The original figure and its image have the same orientation.

Name the image of the figure named under a half turn about point O.

1. \overline{EB} \overline{AI}
2. \overline{DG} \overline{CF}
3. \overline{AI} \overline{BE}
4. Point B $\overline{Point A}$
5. Point G $\overline{Point F}$
6. Point O $\overline{point O}$

9. Which of these figures represent rotations?

Transformations Review

Translations

A translation is a slide. The original figure and its image have the same orientation.

Name the image of each figure under the translation ZZ' .

Point A Point G; \overline{BC} \overline{DF}

1. Which of these figures represent translations?

a. b. c.

d. e. f.

Reflections

A reflection requires a flip. The original figure and its image have opposite orientations.

axis of symmetry point of symmetry

1. Which of these figures represent reflections?

a. b. c. d.

Sketch the axis (or axes) of symmetry for each figure.

2. 3. 4. 5. 6.
