Angle and Segment Proofs Notes

Example 1: Theorem - If two angles are supplementary to the same angle, then they are congruent.

Given: $\angle 3$ and $\angle 4$ are supplementary; $\angle 3$ and $\angle 5$ are supplementary

Prove: $\angle 4 \cong \angle 5$

1. $\angle 3$ and $\angle 4$ are supplementary
 $\angle 3$ and $\angle 5$ are supplementary

2. $\angle 3 + \angle 4 = 180$
 $\angle 3 + \angle 5 = 180$

3. $\angle 3 + \angle 4 = \angle 3 + \angle 5$
 $-\angle 3 \quad -\angle 3$

4. $\angle 4 \cong \angle 5$

1. Given

2. Definition of Supplementary

3. Substitution

4. Subtraction

Example 2: Given: C is the midpoint of \overline{AB} and B is the midpoint of \overline{CD}

Prove: $\overline{AC} \cong \overline{BD}$

1. C is midpt of AB
B is midpt of CD

2. $\overline{AC} \cong \overline{CB}$
 $\overline{CB} \cong \overline{BD}$

3. $\overline{AC} \cong \overline{BD}$

1. given

2. def of midpoint

3. substitution

Example 3:

Given: $\angle ABD \cong \angle YXZ$
 Prove: $\angle CBD \cong \angle WXZ$

1. $\angle ABD \cong \angle YXZ$

2. $\angle ABD + \angle CBD = 180^\circ$

$\angle YXZ + \angle WXZ = 180^\circ$

3. $\angle ABD + \angle CBD = \angle YXZ + \angle WXZ$

4. $\angle ABD + \angle CBD = \angle ABD + \angle WXZ$

5. $\angle CBD \cong \angle WXZ$

1. Given

2. linear pairs are suppl.

3. Substitution

4. Substitution

5. Subtraction

Example 4:

Given: \overrightarrow{VX} bisects $\angle WVY$.
 \overrightarrow{VY} bisects $\angle XVZ$.
 Prove: $\angle WVX \cong \angle YVZ$

1. \overrightarrow{VX} bisects $\angle WVY$
 \overrightarrow{VY} bisects $\angle XVZ$

2. $\angle WVX \cong \angle XVY$
 $\angle YVZ \cong \angle XVY$

3. $\angle WVX \cong \angle YVZ$

1. given!

2. def of \angle bisector

3. Substitution

Example 5: Prove: If $\angle 6$ and $\angle 8$ are complementary, the $\angle 7$ is a right angle.

1. $\angle 6$ and $\angle 8$ are complementary
2. $\angle 6 + \angle 8 = 90^\circ$
3. $\angle 6 + \angle 7 + \angle 8 = 180^\circ$
4. $90 + \angle 7 = 180^\circ$
5. $\angle 7 = 90^\circ$
6. $\angle 7$ is a Right \angle

1. Given
2. def of compl.
3. Angle Addition: Straight Angle
4. Substitution
5. Subtraction
6. def of RT \angle .

what can I conclude from the given?
what can I get from the picture?

Example 6:

Prove the following. given $\overline{PR} \cong \overline{QS}$, then $\overline{PQ} \cong \overline{RS}$.

- 1.) $\overline{PR} \cong \overline{QS}$
- 2.) $PR = PQ + QR$
 $QS = RS + QR$
- 3.) $PQ + QR = RS + QR$
- 4.) $\overline{PQ} \cong \overline{RS}$

- 1.) given
- 2.) segment addition
- 3.) substitution
- 4.) subtraction

Example 7: Given: $\overline{AD} \cong \overline{CE}$, $\overline{DB} \cong \overline{EB}$
Prove: $\overline{AB} \cong \overline{CB}$

- 1.) $\overline{AD} \cong \overline{CE}$
 $\overline{DB} \cong \overline{EB}$
- 2.) $AB = AD + DB$
- 3.) $CB = CE + EB$
- 4.) $AB = CE + EB$
- 5.) $\overline{AB} \cong \overline{CB}$

They are the same stuff!

- 1.) given
- 2.) segment addition
- 3.) substitution
- 4.) substitution
